一、概述

膜片联轴器是国内外广泛采用的新型联轴器。JM系列膜片联轴器是我公司早年与机械部上海材料研究所共同研制成功的新产品，通过十余年的推广应用及改进完善，使产品性能大大提高，并派生了多种系列规格，供不同需要的选择。

JM膜片联轴器属金属弹性元件挠性联轴器，主要依靠金属膜片来联接主、从动轴传递转矩，具有弹性减振、无噪声、不需润滑的优点，它能补偿主、从动轴之间由于制造误差、安装误差，承载变形以及温升变化的影响等所引起的轴向、径向、角向偏移，是当今替代齿式联轴器及一般联轴器的理想产品。

JM系列膜片联轴器具有如下特点：

具有明显减震作用，无噪声，无磨损。

传动效率高，可达99.86%，特别适用于中、高速大功率传动。

能补偿两轴线不对中的位置偏差，挠性大，允许两轴有一定的轴向、径向和角向位移。

适应在温差大(-80℃ ~ +300℃)和恶劣环境中工作，并能在有冲击、振动条件下安全运行。

结构简单，重量轻，体积小，拆装维护方便，不必移动机器即可装拆(指带中间轴型式)。

能准确传递转速，运转无转差，可用于精密机械的传动。

JM系列膜片挠性联轴器被广泛应用于冶金、矿山、石油、化工、电力、船舶、起重运输、纺织、轻工、农机、印刷机械和水泵、风机、机床等行业的机械设备中传递动力。

目前，我公司生产五大系列上百个规格的膜片联轴器，欢迎广大新老用户选用，并希望您提出要求和反馈使用意见，我公司将竭诚为您服务。

I . General

Diaphragm(disc) coupling is a new type coupling to be widely used abroad. It is applied in many imported equipments in our country. JM series diaphragm coupling is a new product developed by Shanghai Material Research Institute and our company.

It can compensate for paralleled as well as angular misalignment between prime mover and driven machine caused by Deformation due to load and temperature vary. Belonging to the flexible coupling with metallic elastic element, JM series diaphragm couplings rely on the metallic diaphragm to connect prime mover and driven machine, and to transmit the torque. It contains some advantages such as flexibly relieving shock, no noise and no lubricating needed. It is good substitute product for gear couplings and other general couplings.

The main characteristics of JM series Diaphragm Coupling:

Obvious dampen shock and no noise, no wearing.

High transmitted efficiency and be available to high speed and superpower transfer motion.

Good ability for compensating the misalignment of two axes. The allowing angular displacement is two times as much as the gear couplings. Low reaction pressure and high flexibility as the radial shifting as well as permitting some axial, angular or radial deviation.

Operating safely under -80℃ ~ 300℃ and bad condition with shock and vibration.

Simple construction, light weight and small size. Easy assembly and disassemble without moving machine. As well as No maintenance required and lubricating.

Accurate transmitting revolution and no slipping. It can be used on precision machinery.

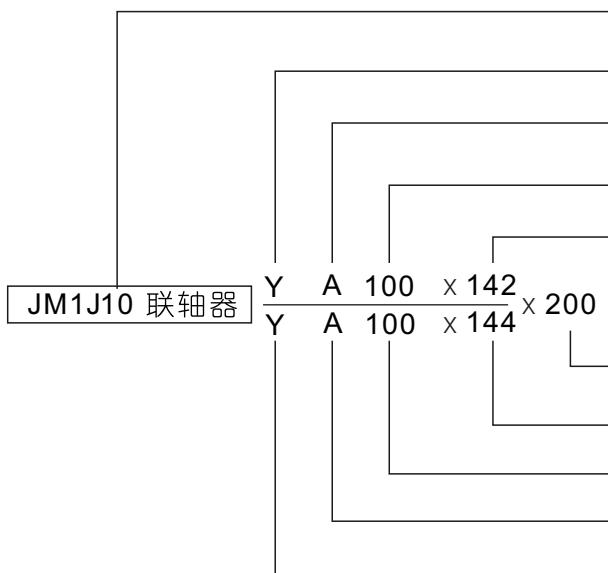

JM series diaphragm coupling is widely used for transmitting power in various kinds of mechanical equipments such as metallurgy, mining, petroleum, chemical industry, agricultural machinery, printing machinery, pump, blower fan and machine too, etc.

At present, hundreds of specifications in five majors series diaphragm couplings are supplied by our company. The warm welcome will be given to the new and old customers for selecting them. further more, we are sincerely in hopes of gaining your feedback information and requirements, and we will try our best to give you the best service!

Novel coupling bring you more benefits!

三、JM系列联轴器的选用方法

联轴器是根据负荷情况、计算转矩、轴孔直径、工作转速来选择的。
(选定联轴器的型号后应对轴和键的强度作校核计算)

计算转矩 T_c 由下式求出：

$$T_c = K_1 K_2 K_3 T = K_1 K_2 K_3 \cdot 9550 \frac{P_w}{n} = K_1 K_2 K_3 \cdot 7020 \frac{P_H}{n} \leq T_n$$

式中：
 T —— 理论转矩, N · m;

1. 本系列为轻转矩负荷的联轴器，传动无转差。通常用于从机械装置中获取控制信号的场合。
2. 联轴器的两个半联轴器配有双向紧定螺钉，同时配有键槽，安装方便。

1. This series coupling is suitable for light torque load, no transmission rotary tolerance. It is generally used in place which getting control signal from mechanism.
2. Both of two half couplings are having screw, keyway. It is easy to install.

九、JM、JM1J系列膜片联轴器的安装偏差说明

IX. Installing deviations of series JM、JM1J coupling

说明：

本样本所列的各种规格膜片联轴器的许用轴向位移见附表1~附表4；许用角向位移见附表5~附表7。实际的安装偏差不能大于相应的许用值。

由角向位移形成的许用径向位移的计算： $Y=C \times \tan \theta$

实际联轴器选用时须考虑各种安装偏差的综合因素，其计算转矩中的安装偏差系数：**K3=K4×K5**（第4页）

K4—角向偏差系数，见图7；

K5—轴向偏差系数，见图8。

Note:

For all kinds of coupling in this manual, the permissible axial displacement see appendices A.table1~A.table4; the permissible angular displacement see A.table5~A. table7. the installing displacement must be less than the permissible value.

the relation between angular displacement to permissible radial displacement is the function as:

$$Y=C \times \tan \theta$$

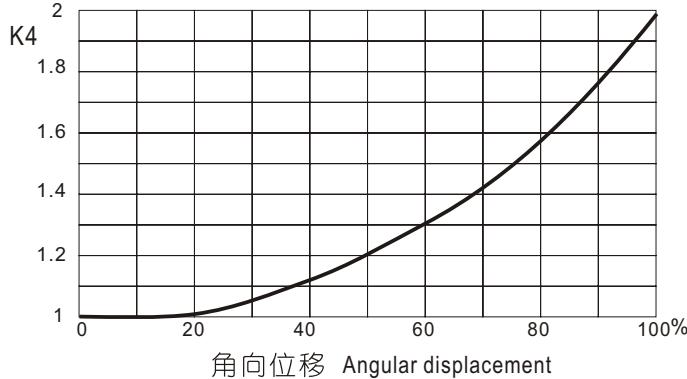

When selecting the coupling, the deviations have to be considered. when calculating torque T_c (page4) , the install deviation coefficient need to be considering:

$$K3=K4 \times K5$$

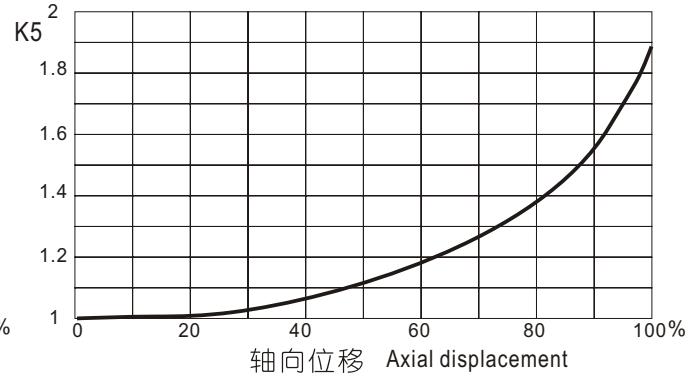

K4—angular deviation coefficient, see fig7;

K5—Axial deviation coefficient, see fig8.

JM1J型膜片联轴器，所选用的中间轴长度大于10倍轴孔径时，工作转速必须低于临界转速，具体事项与企业技术部门联系。

To series JM1J coupling, when the diameter of intermediate sleeve is more than ten times of the diameter of the shaft bore, the working rotatory speed has to be less than the permissible speed. for detail please contact the company's technical department.
